- Highlights:**
 - Variations in the OC storage capacity of urban land would have regional and global effects.
 - Urban land management is a determining factor in enhancing the ecosystemic service of regulation and adaptation to change.
 - Urban soil genesis and anthropogenic factors influence the capacity of soils to store OC.
- Abstract:** The unique characteristics of a city simplify the impacts of climate change; therefore, urban planning in the 21st century is challenged to apply mitigation and adaptation strategies that ensure the collective well-being. Despite advances in monitoring urban environmental change, research on the application of adaptation-
